This site is not available in your country In this video tutorial I show you step by step how to make paper stars. Party decoration ideas . Divide the paper (A4) into 8 parts and make an agreement form. Cut a triangle shape into the extremes. You've just learned how to make these beautiful paper stars!! If you liked this project, you might like some of my others. Check them out at: ArtParticipated in the Reuse ContestParticipated in the Rainbow ContestParticipated in the Bedroom Match Paper Craft at HowStuffWorks is your destination for fun crafts made of paper. Children will enjoy making masks, hats, baskets and other paper wing. Page 2 Recycling has become such a ubiquitous part of modern society that it is difficult to remember a time when all material has been disposed of in the same container. But while the act of recycling is important, we must remember that this is the third on the list of ways to reduce your waste. The popular saying of reduced, reused, recycled is ordered for a reason. The best way to help the environment is by reducing the amount of waste. Reuse is No. 2 before throwing things into a recycling container, and as it turns out, it may also be the most fun way to live an environmentally friendly life. One person's trash can be another's treasure, but in the case of these 10 smart ideas, one person's recycling could be your next art project. Content If your home is like most homes, then you're probably going through a lot of cereal boxes every week. Recycling them is a good idea, but so turn some of them into handy office file boxes. You can thank Martha Stewart for this one. All you have to do is take a cereal box and cut away the top part at a diagonal angle on both sides with a utility knife. Once that's done, just wrap the box with some decorative paper or contact paper and you have a paper file folder. Larger boxes are good for books, while smaller ones are best for papers and magazines. Ad This project is simple and can really help you keep your home in order. If you have some old glass jars ready for the recycling container, go ahead and pull them out. You will also need a 2-by-4-inch piece of wood and a handful of wooden screws. Take the lids off each pot and screw them in the middle of the wooden board, spaced a few inches apart. Then mount that piece of wood at the bottom of a shelf in your wooden store that has clearance underneath it. Fill the pots with everything you like - mixed screws and nails, nuts and bolts, washers, or anything else that can fit. Then, all you have to do is screw the jar in the mounted lid Ad With the amount of information on the internet these days, you can have a hard time getting any use for the phone book falling on your doorstep once a year. Recycling it's a good idea, but so twist turns in a smart Christmas decoration. All you need is some time and some green spray paint. And the good news is, this one will keep your kids busy for a while and it's incredibly simple. Just put your kids with a phone book and let them fold the top corner of each page diagonal down to the spine. As you do so, you'll see that the book will begin to take shape, and once each page is folded down, its cone form can stand upright on its own. Spray the book green and add some small decorations and you have a smart, handmade tabletop Christmas tree. Ad If mum and dad enjoy a bottle of beer from time to time, then the kids are all set for a smart project to turn those bottle caps into refrigerator art. Collect your caps and get some tacky adhesives, small magnets, decorative paper, sequins and beads, and clear sealeds. Use a quarter as a guide, cut out small round background paper pieces with a utility knife. Glue that's on the inside of the cap, and then decorate the rest with the beads, sequins and whatever little decorations suit your fancy. Glue each of the pieces to the paper, and then brush the inside with a clear sealer. Once it's all dry, glue the magnet at the back and place on the nearest refrigerator. Advertisement For this project, all you need is some glass pots, aluminum foil, toothpicks, tape and tea light candles. Once the pots are clean and dry, wrap each one with the aluminum foil and strap down the sides. Then it's time to get creative. Use the toothpicks to penetrate holes in whatever design you are inspired to go along. It can be a picture or large letters spelling out a word when placed side by side. Once dark, place the tea light candle in the bottom of the jar and lift it. The result will be a personal glowing brightness and less glass to be recycled. Advertising Plastic spoons is great for a family picnic, but chances are they either end up in the recycling container, or worse, the trash after the fun is over. Next time you have a picnic, save those spoons and wash them off for some craft time. Along with the spoons, all you need is some colored construction paper and adhesive. Cut strips of the paper about half an inch wide and fold them back and forth until you get small, accordion-like spring legs and arms. Glue the arms and legs to the spoon in the appropriate spots, then decorate the head with eyes, hair and mouth. The result? Create people who are great at using as tree decorations. Advertising This smart project can be a lot of fun to make, and it can teach your kids a little history lesson at the same time. The good news is all you need is two plastic bottles of equal size, a two-hole button, some clear tape and colored sand. Take the lids out of the bottles and find a two-hole button that fits tightly into the mouth of the bottle. Insert your colored sand into one and then place the button in the opening. Then get the other empty bottle and place it on top and strap it all together, together, sure you have a tight seal. Now your hourglass is ready to use. Measure the length of time it takes to completely empty the sand from one bottle to the other and explain to your kids that that was how early timers worked. Ad If there's one thing kids love, it's colored sand. They go crazy for the stuff. This makes this project a good bet for a good time. Take a few glass jars and wash and dry them. Then come together a nice selection of coloured sand from your local craft store. Let your kids lay the sand with different colors, showing them the technique of tilting the jar to form new colored patterns inside. Or put a stick through the sand to create even more pattern. Once the pots are filled, screw up on the lids and hang it wherever you need a bit of fun and colour in your home. Small jars can be hung from the tops of windowsills, while larger pots make great garden art. Ad Babies seem to outgrow their clothes every few months, meaning those sweetheart, teeny little baby socks won't be used well for very long. So here's a smart project that gives them a second life. Collect some ribbon, an embroidery hoop, some colored feel and something to fill the socks with - beads, beans or vesefill stuffing all works well. Decorate each sock with different colors and shapes of feel, googly eyes, and whatever else suits your fancy. Once the sock is decorated, fill it with your filling of choice and tie it down tightly with wire

and then ribbon. Hang the socks at different lengths of your embroidery hoop and you've got yourself a baby sock mobile. Ad This smart project also makes use of those leftover bottle caps, and it involves getting to Mother Nature as well. For this one, you will need some acrylic infestations and brushes, lots of bottle caps, strong wire and various decorations. You also need a Y-shaped branch and the harder the wood, the better. From here, it's pretty simple. Decorate your stick first, paint it in colors that please you, add beads, feathers or sequins to your taste. Once the stick is nice and colorful, hammer the caps flat, punch a hole through the middle of each one with a nail, and string them together between the Y, using the wire. Now your homemade tambourine is complete and all you need is a nice set of earplugs. Do you know how to make jewelry from recycled materials?
